Taller AREP – AWS CLI

22 septiembre de 2025

Prerequisites

1. Install the AWS-CLI application.
2. Configure the AWS-CLI application:

aws configure

Example configuration:

AWS Access Key ID [None]: AKIAIOSFODNN7EXAMPLE

AWS Secret Access Key [None]: wJalrXUtnFEMI/K7MDENG/bPxRfiCYEXAMPLEKEY

Default region name [None]: us-west-2

Default output format [None]: json

Step 1: Create a Key Pair for EC2

```
aws ec2 create-key-pair --key-name MyKeyPair --query 'KeyMaterial' --output text > MyKeyPair.pem
```

```
ls
```

Output:

MyKeyPair.pem

Make the private key readable only by you:

```
chmod 400 MyKeyPair.pem
```

```
ls -la
```

```
CloudShell
us-east-1 +

~ $ aws ec2 create-key-pair --key-name MyKeyPair --query 'KeyMaterial' --output text > MyKeyPair.pem
~ $ ls
MyKeyPair.pem
~ $ chmod 400 MyKeyPair.pem
~ $ ls -la

Crear VPC

Una VPC es una parte aislada de la nube de AWS que contiene objetos de AWS, como instancias de Amazon EC2.

Configuración de la VPC

Recursos que se van a crear

☒ Solo la VPC ☐ VPC y más

Etiqueta de nombre - opcional

Crea una etiqueta con una clave de "Nombre" y el valor que usted especifica.

Step 2: Create a Security Group

First, check for VPCs configured in your account.

```
aws ec2 create-security-group --group-name my-sg-cli --description "My security group" --vpc-id vpc-xxxxxxx
```

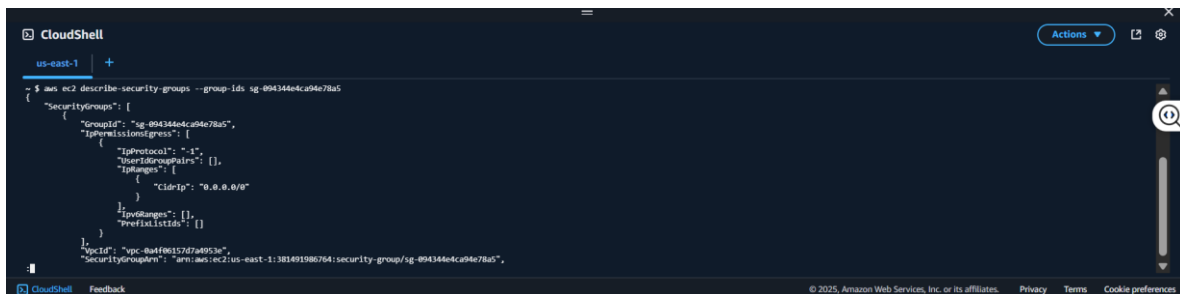

```
CloudShell
us-east-1 +
~ $ clear
~ $ aws ec2 create-security-group --group-name my-sg-cli --description "My security group" --vpc-id vpc-0a4f86157d7a4953e
{
  "GroupId": "sg-094344eca94e78a5",
  "SecurityGroupId": "arn:aws:ec2:us-east-1:381491986764:security-group/sg-094344eca94e78a5"
}
~ $
```

Example output:

```
{
  "GroupId": "sg-01f4c77b81e9dc434"
}
```

List security groups:

```
aws ec2 describe-security-groups --group-ids sg-01f4c77b81e9dc434
```

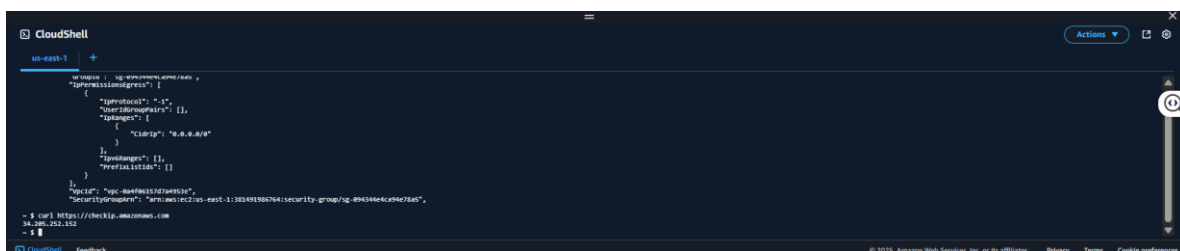

```
CloudShell
us-east-1 +
~ $ aws ec2 describe-security-groups --group-ids sg-094344eca94e78a5

}
~ $
```

Add Ingress Rules

Check your public IP address (optional for restricted access):

curl <https://checkip.amazonaws.com>

```
